ECHO • WEBSITE ADMINISTRATION

Your everyday website guide

Clear steps for the things you can see and do on the ECHO website.

Find consultations. Keep information current. Manage sources. Check collection results.

01

Find your section

Use the table of contents on page 2.

02

Follow the screen

Button names match the website.

03

Check the result

Preview, save and view the public page.

For website administrators
No programming or technical setup is needed to follow this guide.

Edition: 11 November 2026
Screenshots use example records, not a live site.

CONTENTS

Table of contents

01 • YOUR ACCOUNT

Sign in and find your way

Use your usual website address. No special software is needed.

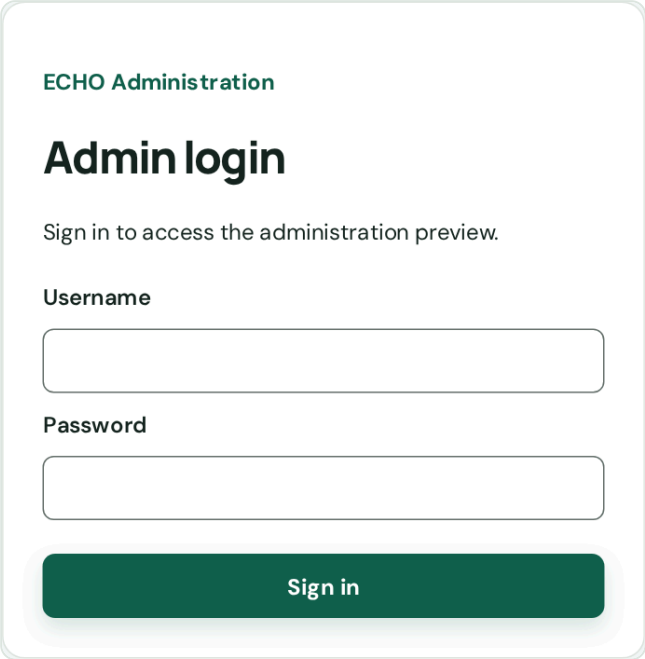

1. Choose **Login for Admins** in the public website header.
2. Enter your **Username** and **Password**, then choose **Sign in**.
3. You will arrive at **Administration**. Choose Pages, Indexes, Scraper or Opportunities.

Return to the public site

Choose **View public site** in the admin header. While signed in, the public header has **Go to Admin panel** to bring you back.

Change your password

Choose **Change password** in the admin header. Fill **New password** and **Re-type new password** with the same password. Choose **Change password** and wait for **Password changed.**

The sign-in screen. Use the credentials supplied to you.

Finish your session

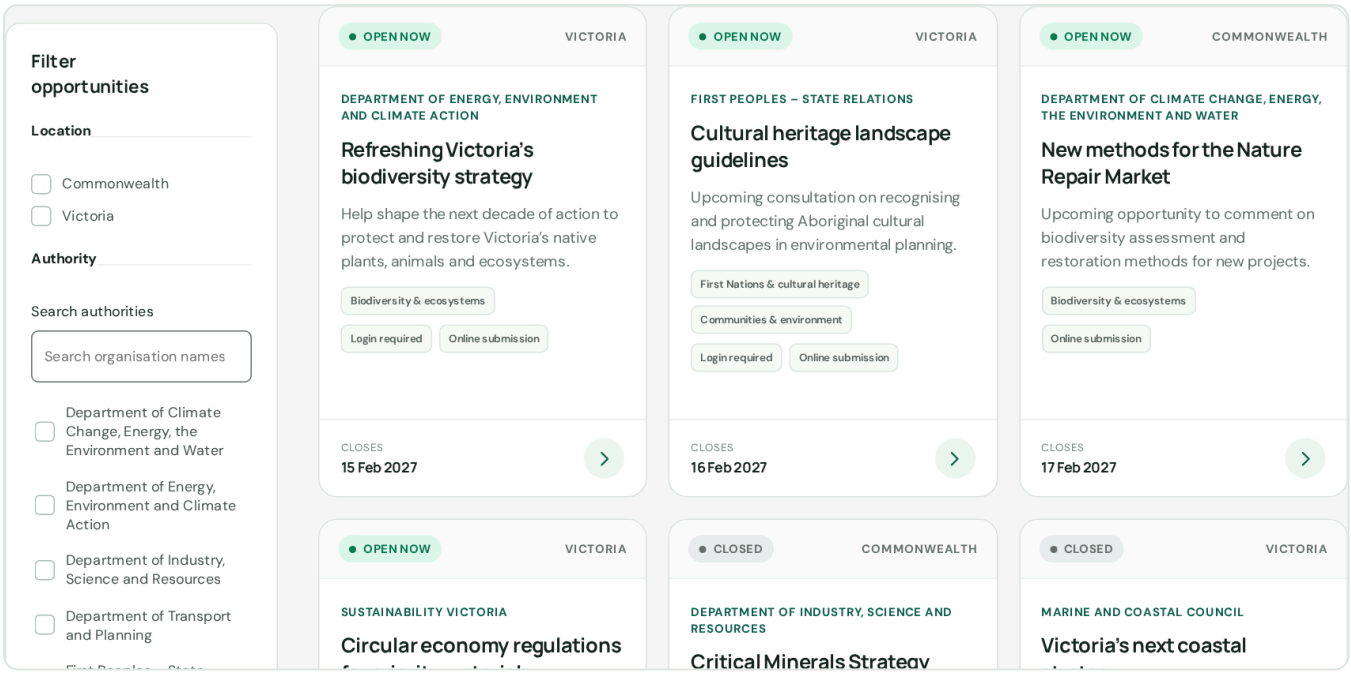

Save your work, then choose **Sign out**. Wait until the login screen appears.

If you cannot sign in
Check your username and password, then retry. If you have forgotten your password or need an account, contact the person who manages your website access. There is no self-service reset or user-management screen in this panel.

02 • PUBLIC WEBSITE

Find and check a consultation

Use the public view to see the website as a visitor would.

Example public results: filters are on the left; consultation cards are on the right.

1. Choose **Opportunities** in the public header.
2. Type a title, topic or organisation in the search box. Use filters to narrow the results.
3. Select a card's title to open the full listing.
4. Check the publisher, opening and closing dates, categories, website features and full description.

Read more and participate

Area affected shows a map when one is available. A map may show a pin or a shaded area. Use its zoom controls to look more closely.

Choose **View original submission** to open the publisher's website in a new tab. Follow that website's instructions to take part.

Choose **Back to opportunities** to return to your previous results and filters.

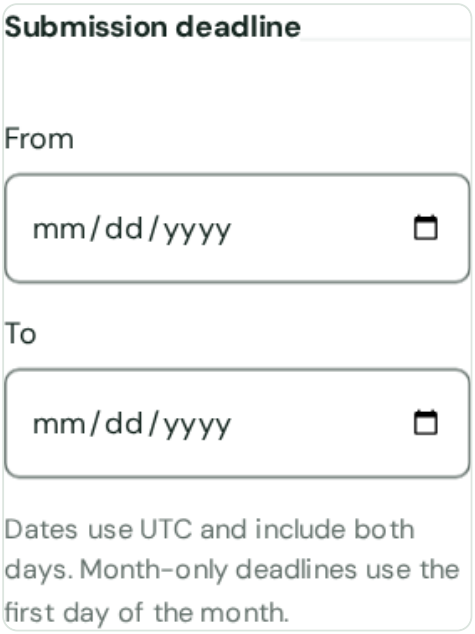

ECHO helps visitors find opportunities
Confirm the latest closing time and participation requirements on the publisher's original page. The public About and Resources links provide background information and participation guidance.

03 • PUBLIC WEBSITE

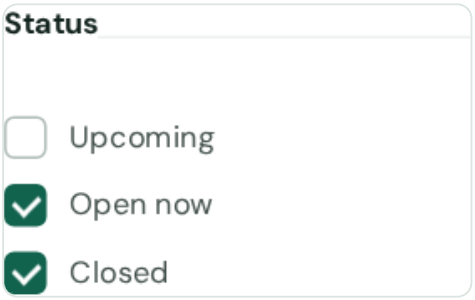

Use filters and understand dates

The starting view shows Open now and Closed. Upcoming is not selected until you choose it.

Filter	What it does
Location	Choose Victoria or Commonwealth. This is broad coverage, not a search within the map.
Authority	Search organisation names, then tick the names you want.
Category	Choose topics. These differ from the source's website features.
Submission deadline	Use From, To or both to narrow closing dates. Both days are included.
Status	Choose Upcoming, Open now and/or Closed. If none are ticked, no results appear.
Access	Choose Public, Invite-only or both. Public does not promise that the publisher needs no login.

From and To follow UTC dates.

Tick Upcoming when you want future openings.

Use **Clear all** to reset filters. To remove a search as well, clear the search box or use **Clear search and filters** when it appears.

> **Month-only closing dates**
> A date shown as "Nov 2026" has no stated day. ECHO currently treats it as closed from midnight UTC on **1 November**, not the end of November. The date filter also treats it as 1 November. Check the original consultation for its actual participation window.

Results group **Upcoming → Open now → Closed**, with the earliest closing dates first within each group. Full desktop pages hold **12 cards: four rows of three**. Smaller screens use fewer columns. On a phone, choose **Filters**, set your choices, then choose **Show … results**.

04 • ADMIN → PAGES

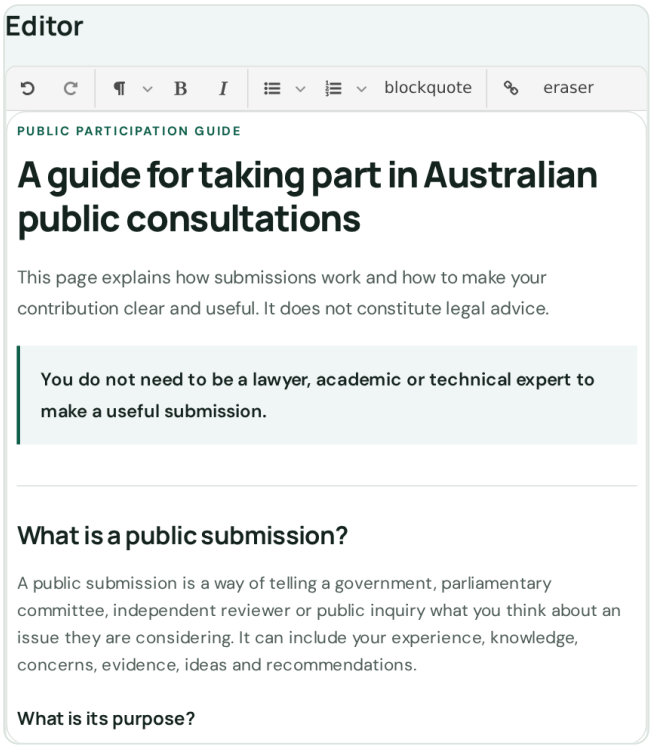

Edit About or Resources

You can write directly in the editor, much like a simple word processor.

The page title, save state and publishing controls appear above the editor.

1. Open **Pages** in Administration. Choose **Edit page** for About or Resources.
2. Click inside the **Editor** and change the wording.
3. Use the toolbar for headings, bold, italic, bulleted or numbered lists, links, Undo and Redo.
4. Scroll down to **Public preview** and check the entire page.
5. Choose **Save and publish**. Wait for **Page saved and published.**
6. Choose **View public page** to check the saved result.

The editor toolbar and example page content.

Use **Heading 1** for the page title, **Heading 2** for main sections and **Heading 3** for smaller sections. Keep headings in a logical order.

> **Saving makes the page public**
> There is no separate approval step after Save and publish. A first-time original template is only starting content until you publish it. “Unsaved changes” means your latest edits are not yet public.

If the editor cannot load, use **Retry loading editor**. Avoid having two people edit the same page at the same time. If you choose to leave without saving, the latest draft changes are discarded.

05 • ADMIN → PAGES

Add structure, pictures and page links

Use these controls after you are comfortable with ordinary text edits.

Insert a styled block

1. Put the cursor where the new section should appear.
2. Choose a block under **Insert a styled block**. Available choices depend on the page.
3. Choose **Insert block**, then replace its sample words.

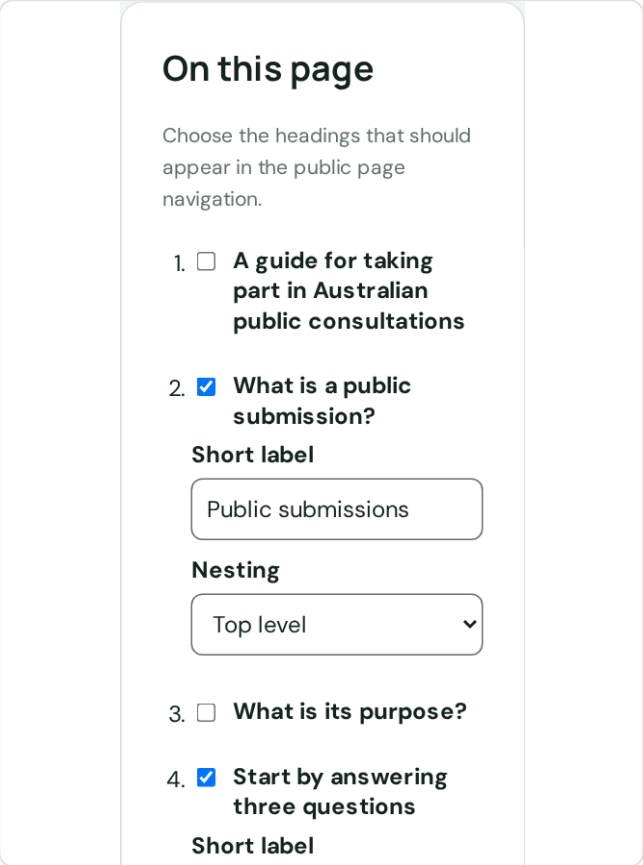

Insert an image from a link

Open **Insert an image from a link**. Paste an image address beginning with **https://**, or use a same-site address supplied to you. Add the required **Alternative text**: a short description of what the image conveys. Choose **Insert image** and replace the sample image caption in the editor.

This screen uses image links; it does not upload a picture from your computer.

Add a link in your text

Select meaningful words, choose the toolbar's link button, enter the full website address and confirm. Test the link after publishing.

The "On this page" controls use the headings in your content.

Keep page navigation clear

Tick the headings you want to include. Use **Short label** for the menu wording and **Nesting** to put an item under an earlier main heading. Choose **Top level** for a main item.

Edit the actual heading in the Editor if the page wording needs to change. Check the navigation on the public page after saving.

Reload original template starts again
It replaces the editor with the prepared starting document, not your last saved version. It does not publish by itself. Choose it only when you intend to start again; use Undo for an ordinary typing mistake.

06 • ADMIN → INDEXES

Add or change a source website

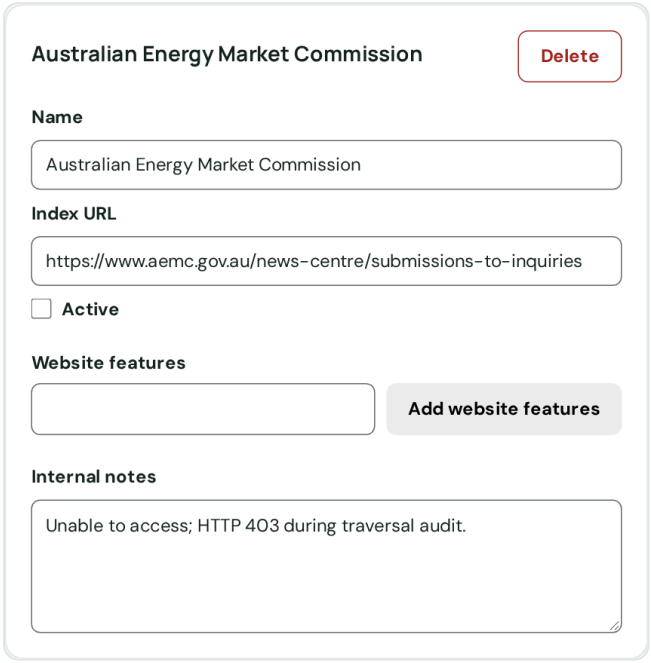

Indexes is the address book of websites ECHO checks.

Add a source here, then save the whole set of changes.

1. Choose **Indexes** in Administration. To add a source, choose **Add website index**.
2. Fill **Name** and **Index URL**. The Index URL is the full https:// address of the page to check for consultations.
3. Tick or untick **Active**. Use **Website features** for labels such as Login required. Type a label and choose **Add website features**; use × to remove one.
4. Add optional **Internal notes**. These notes are for administrators, not public visitors.
5. Choose **Save all changes**. Wait for **Website index changes saved.**

The saved name, address and Active/Inactive status appear on the public **Indexes** page.

One source's editable details.

> **Website features affect every listing from that source**
> They are not categories for one consultation. Check source-wide changes carefully, especially Invite-only. A new source may need a support check before it can be collected.

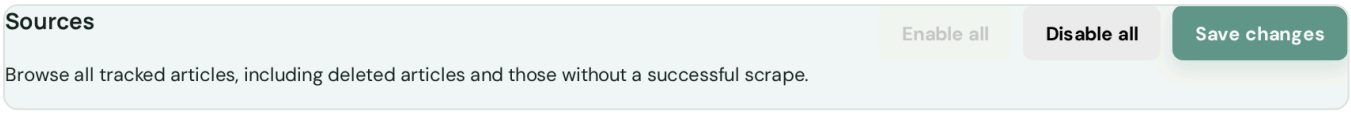

Remove a source

Delete marks an existing source for deletion; **Undo deletion** cancels that draft choice. **Save all changes** applies it. A source with published opportunities cannot be deleted here: make it inactive instead.

07 • ADMIN → SCRAPER → SOURCES

Choose what ECHO collects

Each source has its own Enabled for scraping switch. Changes stay drafts until saved.

The source controls apply changes only when you select Save changes.

Change an individual source

1. Open **Scraper**, then **Sources**.
2. Find the source and change its **Enabled for scraping** switch.
3. Choose **Save changes** and wait for **Source settings saved.**

An enabled source switch before pausing.

The same individual choice while all sources are paused.

Pause all sources

1. Choose **Disable all**. Source cards become grey and their switches cannot be changed while paused.
2. The individual on/off choices are retained. Choose **Save changes** to apply the pause.

Resume your choices

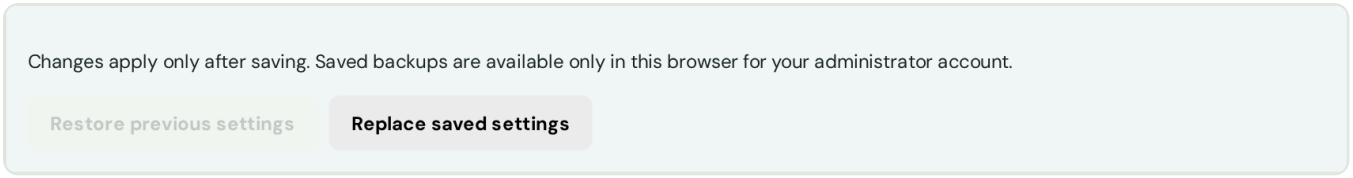

Choose **Enable all**, then **Save changes**. The grey pause is lifted and your individual choices return. Use the same browser and administrator account you used to pause. Despite the name, Enable all does **not** make every source individually enabled.

> **Pausing is not deletion or cancellation**
> It affects later collection choices. It does not remove existing listings or stop work already underway. Active/Inactive is a collection setting, not a report that the last run succeeded.

08 • ADMIN → SCRAPER → SOURCES

Keep and restore source choices

The panel can remember a previous selection in this browser for your administrator account.

The backup area shows when a saved selection is available.

What happens when you pause

Before the first **Disable all** action, the panel keeps a backup of the current visible choices, including individual changes you have not saved yet. Repeated pause/resume actions and saves keep that backup; they do not automatically replace it.

Restore a previous selection

1. Choose **Restore previous settings**.
2. Read the message showing restored and skipped sources. Removed or changed sources may be skipped; new sources keep their current choices.
3. If the panel is still grey and says **All sources paused**, choose **Enable all** to lift that pause.
4. Review the individual switches, then choose **Save changes**.

Replace the backup deliberately

1. Set the individual choices you want to keep.
2. Choose **Replace saved settings**.
3. Check the message and saved time. This updates the backup; it does not apply unsaved source settings.
4. Choose **Save changes** if you also want those choices to take effect.

> **Use the same browser and account**
> Backups and remembered pause/resume choices do not automatically follow you to another browser or computer. Clearing browser storage can remove them. If saving the backup fails, read the error: the bulk action has not been applied. Do not assume the sources were paused.

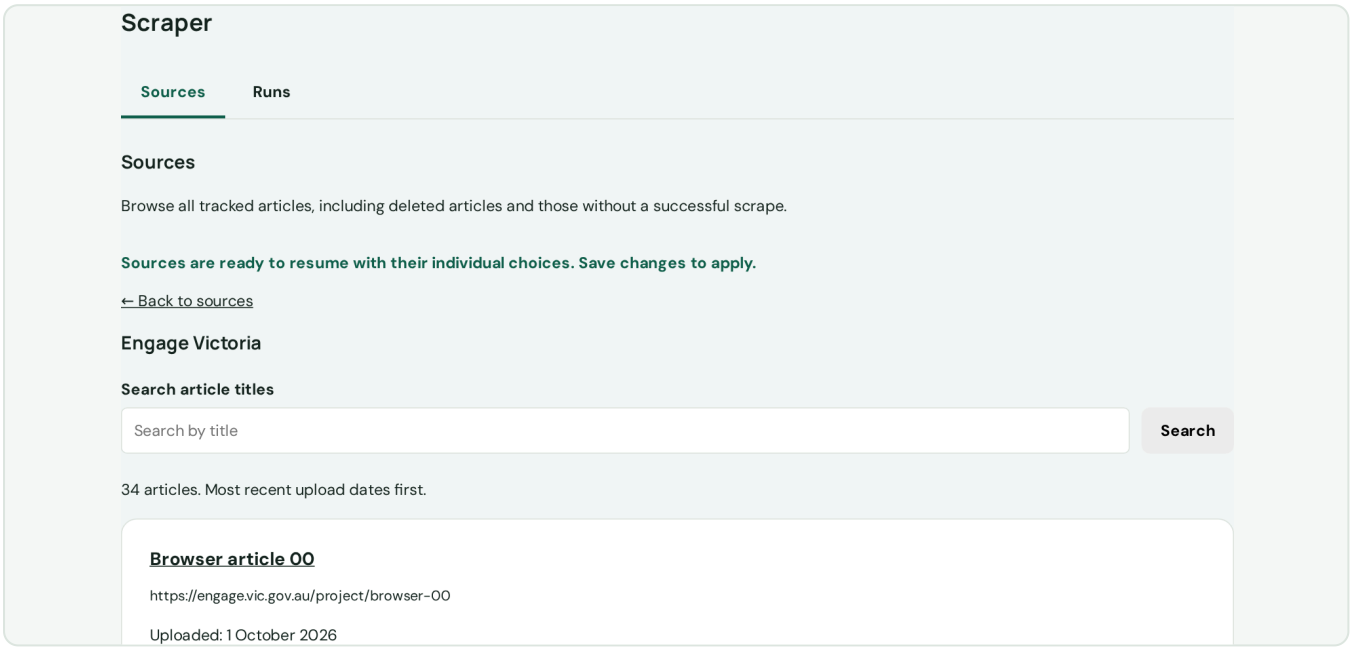

If another administrator changed a source

Keep a note of the choices you intended. Use **Reload sources** to see the latest saved settings, review the prompt about discarding drafts, then reapply only the changes you still need. Reloading can discard unsaved choices.

09 • ADMIN → SCRAPER → SOURCES

Look through tracked articles

Choose a source name to see its article history. Disabled sources remain visible.

The source's article list has title search and newest upload dates first.

1. Choose **Scraper → Sources**, then select the source name.
2. Use **Search article titles**. Type part of a title; results update shortly, or choose **Search**.
3. Use **Next** and **Previous** when there are more results.
4. Select an article title to open its original page in a new tab. Use **View opportunity** when that link is available.
5. Choose **Back to sources** to return.

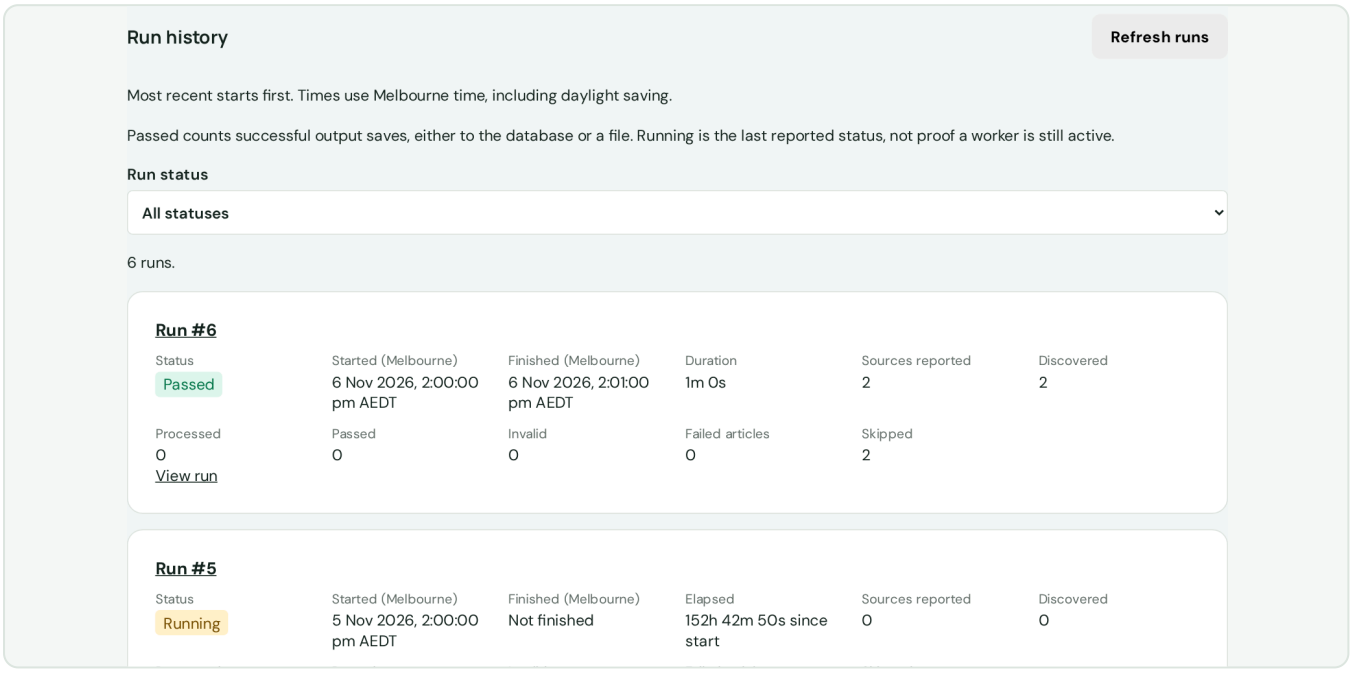

Label	Meaning
Scraped	A successful scrape is recorded for this article.
Tracked — no successful scrape recorded	ECHO knows about the article, but a successful scrape has not been recorded.
Deleted	The listing was removed and is still shown in history.
Date unknown	The original upload date is not known.

Uploaded is a first-upload date, not necessarily the most recent collection time. **Unassigned articles** means the originating source is unknown. This list does not necessarily include every page found or rejected during a run.

10 • ADMIN → SCRAPER → RUNS

Check collection runs

Runs shows the reported outcome of each automatic collection attempt.

Run history shows the newest starts first, with a status filter and Refresh runs.

1. Choose **Scraper → Runs**.
2. Use **Run status** to show All statuses or one result type.
3. Read the start/finish times and counts. Run times are labelled Melbourne and adjust for daylight saving.
4. Choose **View run** or the run number for details. Use page links when more runs are available.

Run status	How to read it
Running	The latest report says the run has not finished. It is not proof that work is still active.
Passed	The collector reported completion without a technical failure.
Failed	A technical problem occurred. Some sources or listings may still have succeeded.
Interrupted	The run stopped before normal completion.

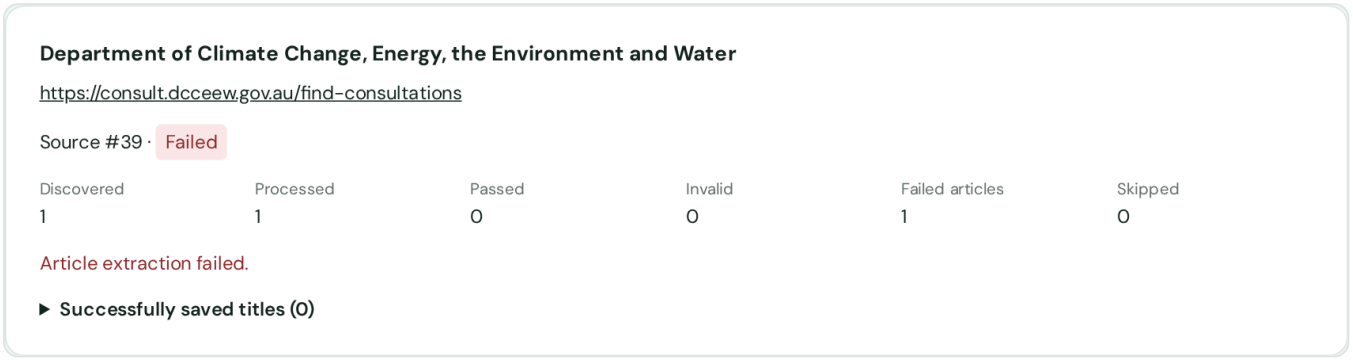

Refresh updates the display

Visible history refreshes about every 15 seconds. You can also choose Refresh runs. A new run may appear only after collection has finished. Refresh does not start a run; there is no start or cancel button in this panel.

11 • ADMIN → SCRAPER → RUNS

Understand a run’s details

The top summary covers the whole run. Filters change the visible source results, not those totals.

An example source result with its counts and an error message.

Find a source or saved title

Use **Search source names**, **Source result** and **Search saved titles**. Expand **Successfully saved titles** to read the names. Repeated titles can be genuine; they are not links to public listings.

Use **Refresh run** to check for a newer report. A Running detail refreshes while visible until a finished status is reported. If a refresh fails, the last loaded results remain with an error message.

Use **Back to runs** to return to the list.

Count / result	Meaning
Discovered	Candidates found; some may not have been attempted.
Processed	Attempts made: Passed + Invalid + Failed articles.
Passed	Successful saves reported; this can include saved file output, not just a public listing.
Invalid	Articles that did not meet the listing rules.
Failed articles	Attempts with a technical problem. A source can fail before any article attempt.
Skipped	Articles not processed again, such as unchanged or previously deleted ones.

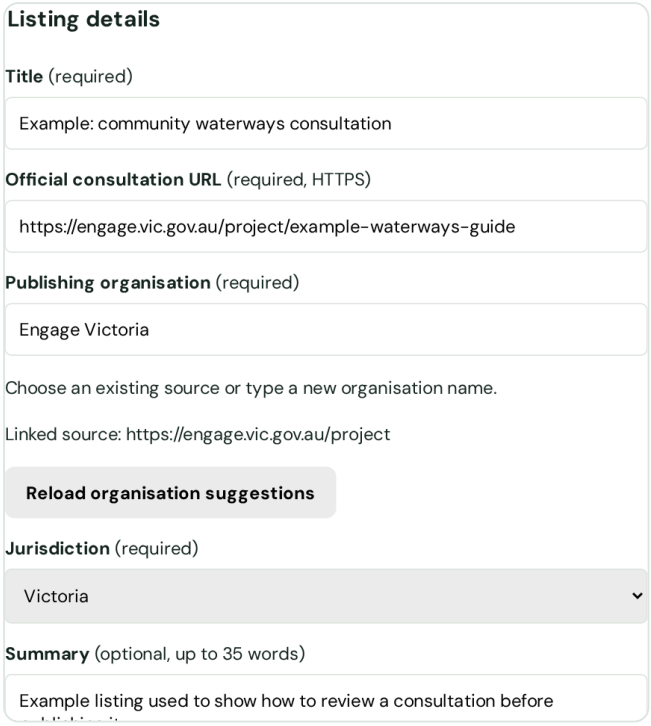

A source can be **Passed, Failed, Empty** or **Skipped**. Empty means no candidates were found; Skipped means the source was not processed in that run. Use any displayed error message to help your website contact investigate. Check the public catalogue separately to confirm a listing is visible.

12 • ADMIN → OPPORTUNITIES

Start a new listing

Use this when an administrator needs to publish a consultation manually.

1. Open **Opportunities** in Administration, then choose **Create opportunity**.
2. Enter the **Title** and the publisher's **Official consultation URL**. Use the actual full address beginning with https://.
3. Start typing **Publishing organisation**. Choose the correct suggestion, using the shown address to distinguish similar names.
4. Choose **Jurisdiction**: Victoria or Commonwealth.
5. Add a short **Summary**, or leave it blank to use the start of the first paragraph. The summary allows up to 35 words.
6. Enter the main text in paragraphs. Use **Add paragraph**, **Move up**, **Move down** and **Remove** to organise it.
7. Select at least one **Category**.

Example listing details. Replace sample wording with the publisher's information.

If the organisation is new

You can type a new name. Fill the additional **Organisation index URL** with the organisation's consultation-listing address. Publishing also creates that source with scraping disabled. Enable it later only when appropriate.

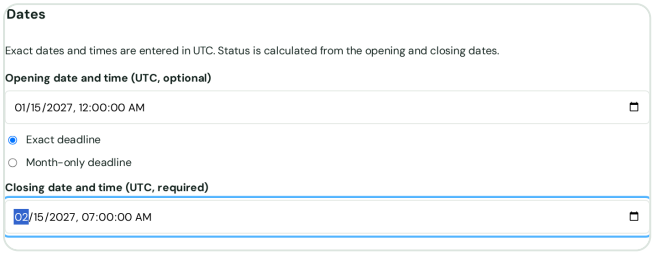

> **Choosing a suggestion matters**
> Typing an organisation's name is not the same as selecting it. If you edit the name after selecting a suggestion, the selection is cleared. Choose the suggestion again, or complete the fields for a new organisation.

Under **Website tags**, Invite-only and Other tags apply to **all opportunities from that source**. Check this before changing them. Categories describe the individual listing; website tags describe the source.

13 • ADMIN → OPPORTUNITIES

Set the dates and optional map

Read the date labels carefully: exact times on this form are entered in UTC, not Melbourne time.

The Dates section has an optional opening time and two closing-date choices.

Exact deadline

Enter the closing date and time in the field labelled **UTC**, using the date format your browser shows. The opening is optional, but it must not be later than the closing.

UTC is a shared world clock. Melbourne is 10 hours ahead in standard time and 11 hours ahead during daylight saving.

Melbourne example	Enter in UTC
5 pm, 15 July 2027	07:00, 15 July 2027
5 pm, 15 January 2027	06:00, 15 January 2027

Near midnight, converting time can also change the date. If unsure, confirm the correct UTC date and time before publishing.

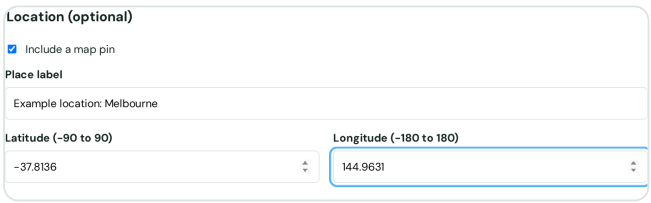

Month-only deadline

Choose **Month-only deadline** when only a month and year are available. Enter the month and year without inventing a day.

> **The month starts the closed status**
> ECHO treats a month-only closing as midnight UTC on the **first day** of that month. It is not an end-of-month closing. Opening times later than that point will be rejected.

Optional map pin

Tick **Include a map pin** only when you have a reliable place label and verified latitude/longitude. Enter both numbers. Do not guess or use an office address for a different affected area.

The map fields require a label and both coordinates.

Leave the map option off when no reliable location is available. This form adds a pin; it does not draw an area boundary.

14 • ADMIN → OPPORTUNITIES

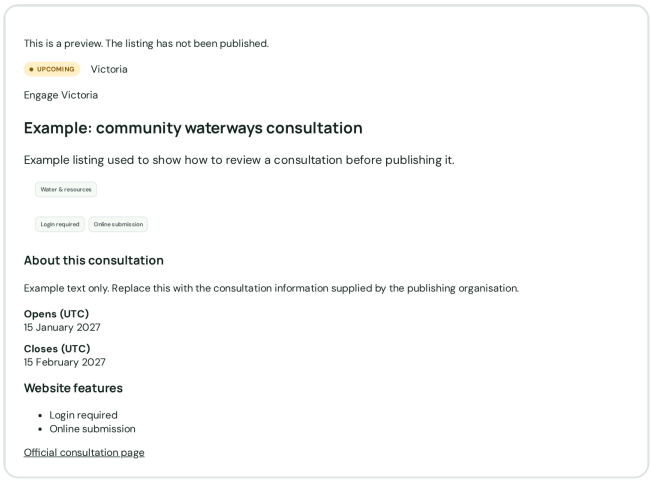

Preview, check, then publish

Preview is your final review step. It does not publish the listing.

1. Choose **Preview opportunity**. If a field needs attention, read the message, correct it and try again.
2. Check the title, publisher, text, categories, source-wide tags, opening/closing dates and map if included.
3. Open the original consultation link to confirm the information.
4. Choose **Edit listing** to return and correct anything. Your entries stay in the form.
5. When ready, choose **Publish opportunity**. Wait while it publishes.
6. The public detail page opens after a successful publish. Check the result there.

Edit listing returns to the form; Publish opportunity makes it public.

A preview is clearly labelled as not yet published.

If publication fails

Your current entries remain on the screen. Read the error before retrying. If **View existing opportunity** appears, check that listing first: avoid creating a duplicate.

> **Saving and leaving**
> There is no saved-draft library for new listings. Keep a separate copy of long text if you need to finish later. Leaving without saving or publishing can discard your work.

Need to correct an already published listing? This panel currently creates new listings and exports them; it has no edit/delete listing screen. Contact your website support person rather than making a second copy.

15 • ADMIN → OPPORTUNITIES

Download all opportunities

The export is an Excel workbook containing every current listing.

Export all opportunities appears beside the Opportunities heading.

1. Open the admin **Opportunities** tab.
2. Choose **Export all opportunities**. The button changes to **Exporting…** while the file is prepared.
3. Find the downloaded file in your browser's downloads or Downloads folder. The name starts **echo-opportunities-** and ends in **.xlsx**.
4. Open it in Excel or another spreadsheet viewer. If the export fails, stay on the panel and choose the button again.

What is included

Titles, publishers, jurisdiction, source details, original links, summaries, full text, opening and closing dates, categories, source tags and location.

The file includes open, upcoming and closed listings, including listings from inactive sources. Public search filters and page numbers do not limit it.

Dates and location

Exact times in the workbook use Melbourne time, with the correct UTC+10 or UTC+11 offset. Month-only closings remain a month and year.

If a listing has no place label, Location uses its jurisdiction instead.

> **Very long text is still included**
> A cell may point to the **Long values** worksheet. Find the same Reference there and read the Text parts in numerical Part order (1, 2, 3…). This is how the workbook keeps unusually long content without cutting it off.

In the spreadsheet, use the heading filters to narrow what you see. An empty catalogue still downloads a workbook with headings.

16 • HELP AND ROUTINE CHECKS

When something needs attention

Read the message on the page before changing or repeating an action.

What you see	What to do
Unsaved changes / leave-page prompt	Stay on the page if you want to finish. Save and wait for confirmation. Leaving without saving discards the draft.
A save button is grey	It may be saving, the editor may still be loading, or there may be no changes to save. Check the page's status and messages.
Session expired / security token message	Copy any important unsaved text first. Sign in again if asked, or reload the page as the message directs. Then review before retrying.
Another administrator changed these records	Note your intended changes. Reload the latest saved settings, then carefully reapply what is still needed. Do not repeatedly overwrite.
No opportunities found	Clear search and filters. Remember Upcoming is off by default. Check the publisher's original page if the timing seems wrong.
Table under maintenance on public Indexes	Use Try again. If it continues, tell your website contact. This message alone does not prove a collection run is active.
Run or articles temporarily unavailable	Use the displayed Retry or Refresh button. Check whether you are seeing last loaded results. Ask for help if it persists.
A source cannot be deleted	It has published opportunities. Make it inactive instead if it should no longer be checked.

A short routine check

- Open the public catalogue and check a few original links.
- Review recent Runs and any source errors.
- Review planned source settings before saving.
- Check changed pages on the public website.
- Save your work, then sign out.

Ask for help with useful details

Record the page or run number, what you were trying to do, the exact message and the time. A screenshot can help. Do not include your password.

> **Remember the clock shown on each screen**
> Listing entry and public date filtering use UTC. Run timestamps and spreadsheet exact times use Melbourne time. Confirm the publisher's own deadline before making a time-sensitive change.
